U.S. Patent and Trademark Office PTOL-326 (Rev. 08-06) Art Unit: 2834

#### DETAILED ACTION

### Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper". Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

## **Drawings**

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the reflectors located adjacent to the idt's, cavity length and aperture size must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended". If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an

Art Unit: 2834

application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Specification

3. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

# Claim Rejections - 35 USC § 103

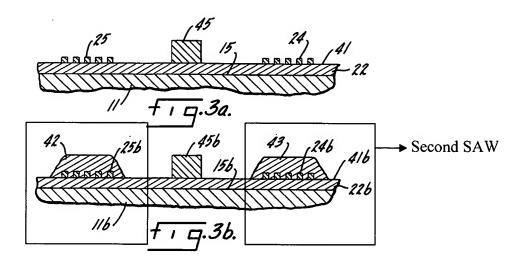

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kiewit (US 4107626) in view of Baer (US 5283037).

Kiewit discloses a sensor which incorporates a) a first layered SAW device consisting of a piezoelectric crystal (22) with interdigital electrodes (25) on its surface, and second piezoelectric layer (42) over said interdigital electrodes (25) b) a second layered SAW device consisting of a piezoelectric crystal with interdigital electrodes on its surface, a second piezoelectric layer over said interdigital electrodes c) both saw devices are fabricated on the same substrate d) reflectors (45) are located adjacent the interdigital electrodes in each saw

10/590,367 Art Unit: 2834

device to reduce the bandwidth of the device e) the resonator circuits of each saw sensor incorporate amplifiers (28 and 29)which are dependent.

Kiewit fails to disclose an analyte sensitive surface on said second piezoelectric layer.

Baer discloses the use of layer 18 disposed over the piezoelectric layer and idt's to react with the chemicals to be tested.

Therefore, it would have been obvious at the time of the invention was made to use a chemically reacting layer covering the SAW structure to react with the solvents to be tested.

Regarding claim 2, the combination of Baer and Kiewit discloses the claimed invention.

5. Regarding claim 3, Kiewit discloses the use of zinc oxide, but fails to disclose the use of lithium niobate or lithium tantalate. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use known piezoelectric ceramics depending on the specific requirements of the particular application, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its

Art Unit: 2834

suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Regarding claim 4, Baer discloses analyte sensitive surface being SiO<sub>2</sub> and fails to disclose the use of gold. However, as explained above, the selection of materials depends on the suitability for the intended use.

Regarding claims 5 and 6, the combination of Kiewit and Baer discloses the claimed invention but fails to disclose the specific values of the cavity length and the aperture size. However, It would have been obvious to one having ordinary skill in the art at the time the invention was made to use such values, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Regarding claim 7, Kiewit discloses the use of grooved gratings.

#### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jaydi A. San Martin whose telephone number is 571-272-2018. The examiner can normally be reached on M-Th 9-7.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren E. Schuberg can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
